

Congratulations!

You have carefully selected one of the most rare & beautiful gems in the world.

To ensure a lifetime of appreciation & enjoyment please follow the simple care instructions on the other side of this card.

www.korite.com

Cleaning: Clean your Korite Ammolite jewellery by using a soft, damp cloth to gently wipe away any marks or dirt. Do not use ultrasonic cleaning equipment to clean your Korite Ammolite jewellery. Do not use detergents or chemicals to clean your Korite Ammolite jewellery.

Water: Korite recommends that you limit contact with water while wearing Ammolite. Some locales have high mineral content in the water. These minerals can deposit on the surface of the Ammolite & setting, damaging the finish of your jewellery. As with all fine jewellery care should be taken to avoid direct exposure to soaps, detergents, cleaners & other chemicals.

Heat: Avoid direct exposure to intense, direct heat.

Storage: Store your Ammolite jewellery in it's original box when your not wearing it. Hard impacts can damage the setting or damage a finished Ammolite gem.

Alterations: Korite's expert craftsmen carefully set each Ammolite gemstone in our jewellery for a lifetime of enjoyment. If you are considering sizing or modifying your Korite piece please contact us prior to having any work done.
